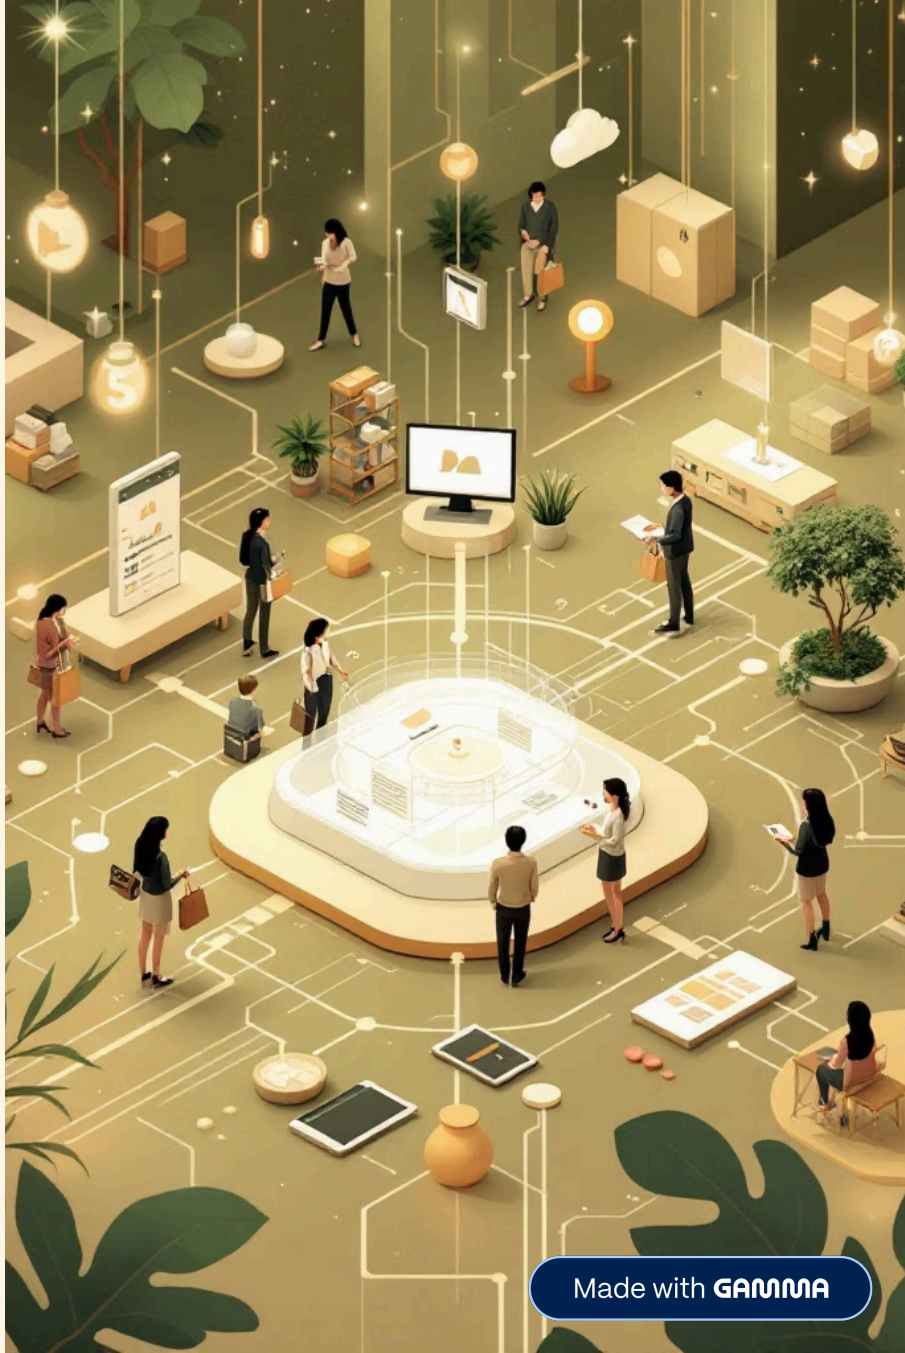
RetailConnect

Retailer and Wholesaler Collaboration Platform Using IBM Watson Assistant Chatbot

Krishnakant Nikhade | B.Tech Computer Science

Project-Based Experiential Learning / Virtual Internship | 2026



Made with GAMMA

Introduction

The retail sector is undergoing rapid digital transformation, with supply chain collaboration becoming critical for competitive advantage. Traditional communication barriers between retailers and wholesalers create inefficiencies that impact business performance.

Digital platforms enable seamless connections, real-time information exchange, and automated assistance—transforming how businesses collaborate in modern supply chains.

Made with GAMMA

Problem Statement

Current challenges in retailer-wholesaler collaboration create operational bottlenecks and inefficiencies.

Communication Gaps

Lack of direct, efficient communication channels between retailers and wholesalers delays decision-making.

Supplier Discovery

Difficulty finding and verifying reliable wholesale suppliers in local and regional markets.

Manual Processes

Time-consuming manual inquiries and lack of automated assistance for routine business questions.

Inefficient Supply Chains

Poor information flow creates delays, stock issues, and coordination challenges.

Made with GAMMA

Project Objectives

01

Digital Platform Development

Build a comprehensive platform connecting retailers and wholesalers for seamless collaboration.

02

AI-Powered Assistance

Provide instant, intelligent assistance through an IBM Watson Assistant chatbot.

03

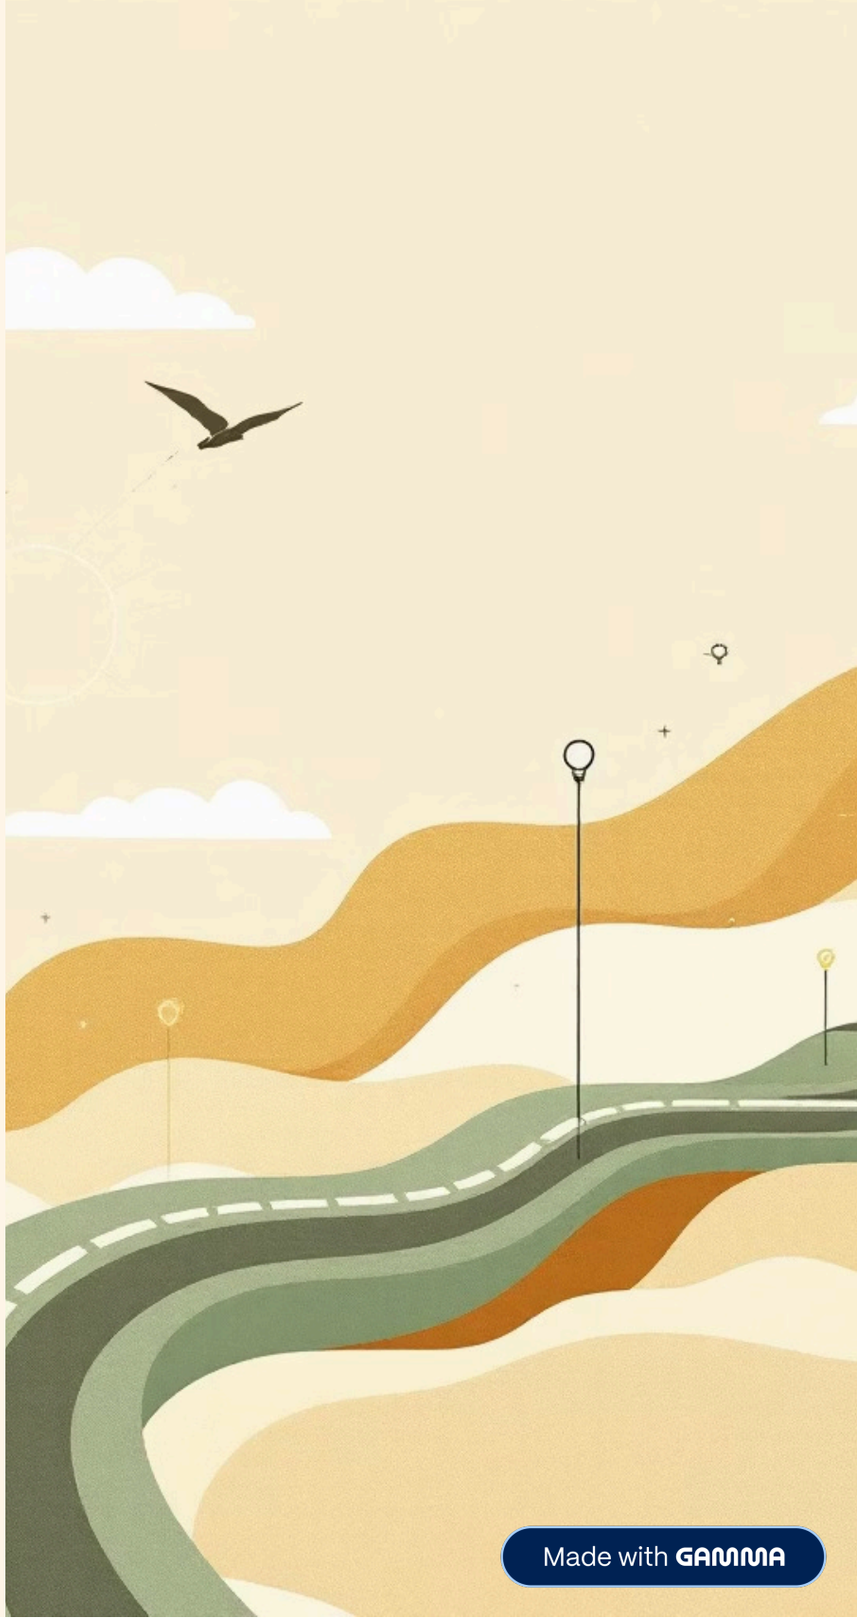
Supply Chain Communication

Improve real-time communication and information sharing across the supply chain.

04

Quick Information Access

Deliver rapid answers to business queries using IBM Watson AI technology.



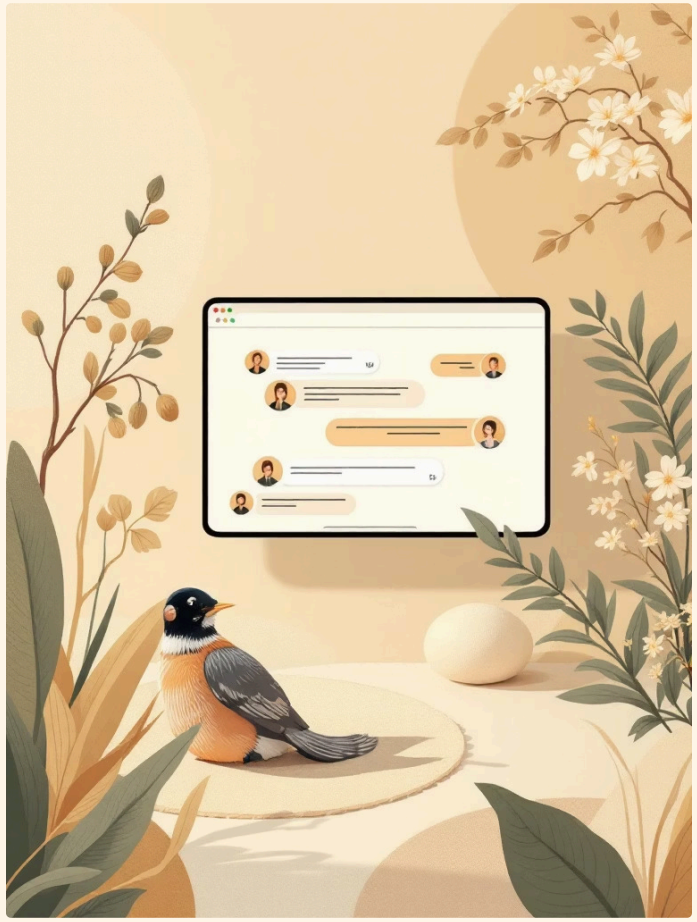
Made with GAMMA

Proposed System

Platform Overview

A static business website integrated with an IBM Watson Assistant chatbot, designed to facilitate retailer-wholesaler connections and provide automated business assistance.

- Supplier discovery and verification
- Service information and catalog browsing
- Instant AI-powered query resolution
- Business collaboration tools



Made with GAMMA

Development Methodology

System Planning

Requirements analysis, system design, and architecture planning for the platform.

Website Development

Design and build a responsive static business website with modern UI/UX principles.

Chatbot Creation

Develop intents, entities, and dialog flow for IBM Watson Assistant to handle business queries.

System Integration

Connect Watson Assistant chatbot with the website using IBM Cloud platform services.

Testing & Deployment

Comprehensive testing, debugging, and deployment to production environment.

Made with GAMMA

Technologies Used

HTML

Structured content and semantic markup for the website foundation.

CSS

Styling and responsive design for modern, professional interface.

JavaScript

Interactive functionality and chatbot integration on the client side.

IBM Watson Assistant

AI-powered chatbot for intelligent business query processing and responses.

IBM Cloud Platform

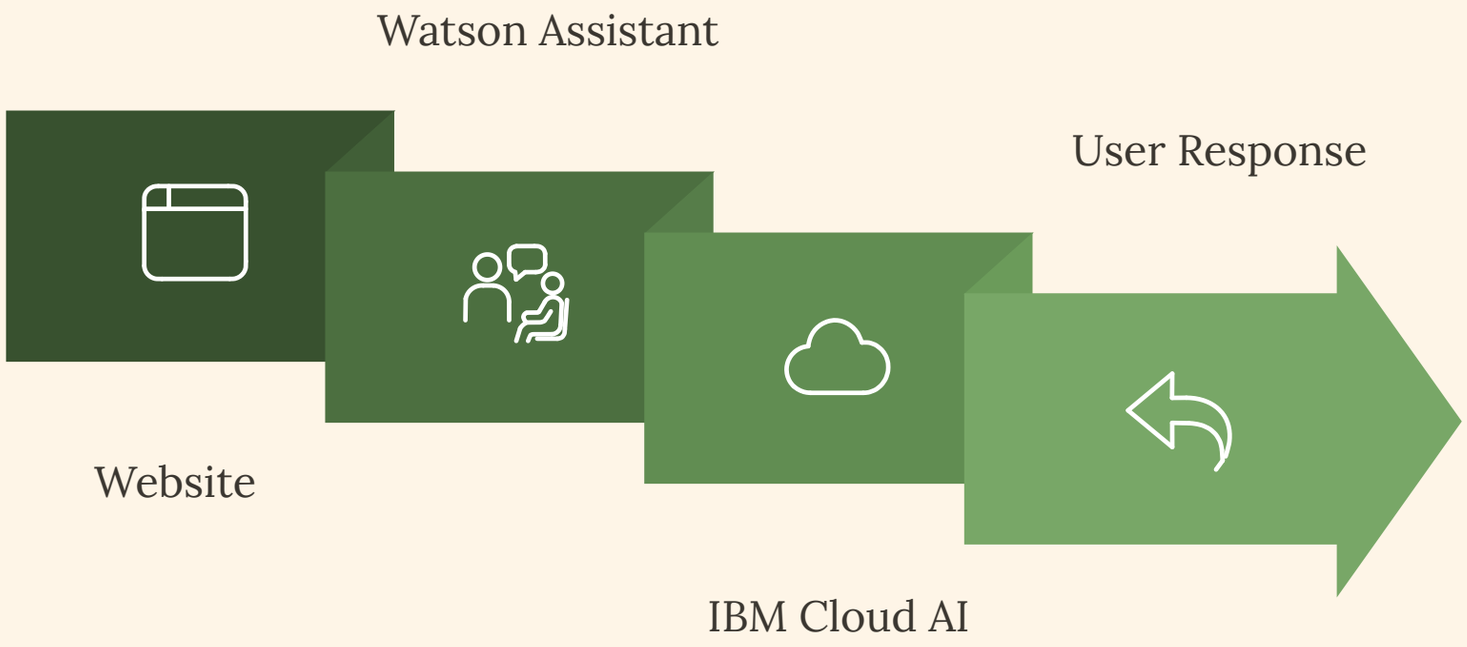
Cloud infrastructure for hosting, deployment, and scalable operations.

VS Code

Code editor for development with extensions for web technologies.

Made with GAMMA

System Architecture



The architecture follows a clean client-server pattern with AI processing in the cloud. User queries flow through the website interface to Watson Assistant, where IBM Cloud handles natural language processing and intent recognition before delivering responses.

Made with GAMMA

Implementation & Results

Implementation Process

- Chatbot training with business-specific intents and entities
- Dialog design for natural conversation flows
- Web chat integration using IBM Watson SDK
- Testing with sample retailer and wholesaler queries

Key Achievements

- Functional website with integrated AI chatbot
- Real-time query processing and responses
- Seamless user experience across devices
- Scalable cloud-based infrastructure

Made with GAMMA

Conclusion & Future Scope

Advantages

- Automated customer service reduces response time
- Improved supply chain communication
- Faster information access for business decisions
- Digital collaboration platform

Limitations

- Limited training data scope
- Internet connectivity dependency
- Understanding constrained to trained intents

Future Enhancements

- Product database with inventory management
- Mobile app for iOS and Android
- Machine learning for personalized recommendations
- Payment gateway integration

AI-powered chatbots combined with cloud technologies create powerful digital business platforms that transform supply chain collaboration and retail operations.
